

24h ending 12Z 16 Apr 2016

ST4/URMA 24h ending 12Z 16 Apr 2016

AHPS 24h pcp ending 12Z 16 Apr 2016 (netCDF)

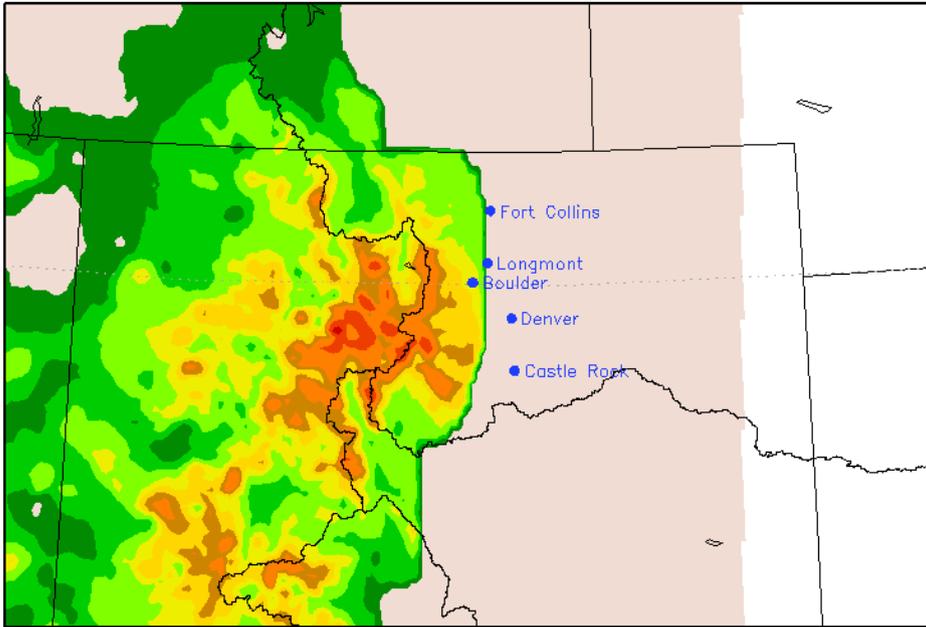

Summed from ST4 6h totals. ST4 6h total is from 6h QPEs from NW/CN/CB/MB RFCs, and summed from hourly QPEs from the 8 central/eastern RFCs.

From <http://water.weather.gov/precip/download.php> 24h totals from 24h QPE from NW/CN/CB/MB RFCs and hourly QPEs from the other 8 RFCs (?)

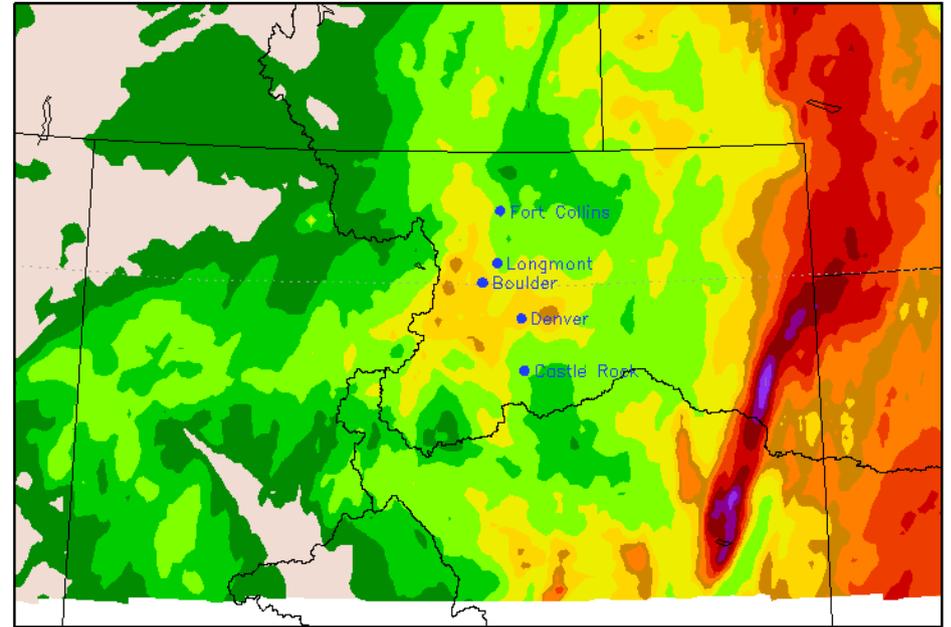

Currently precip URMA is 6hrly only. If 24h QPEs from the western RFCs are closer to the “true daily total” than sums from their four 6-hrly QPEs, perhaps we ought to produce URMA 24h totals in addition to the 6h URMA. We currently receive direct 24h QPEs only from NWRFC.

RFC 24h totals summed from 6h QPEs

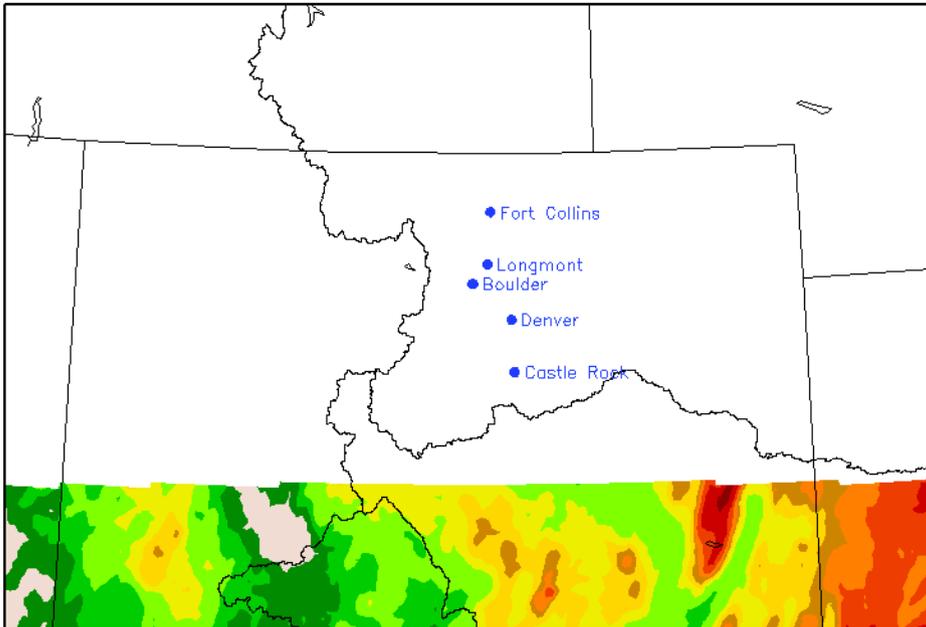

CBRFC 24h (sum of 6h QPEs) ending 12Z 16 Apr 2016

MBRFC 24h (sum of 6h QPEs) ending 12Z 16 Apr 2016

WGRFC 24h (sum of 6h QPEs) ending 12Z 16 Apr 2016

ABRFC 24h (sum of 6h QPEs) ending 12Z 16 Apr 2016
